

APPLICATION GUIDE

How to Apply UV DTF Transfers

Louisiana Shirt Co. · Formerly DTF Gang · louisianashirtco.com

UV DTF transfers are stick-on: no heat press needed. They work on hard, smooth surfaces like tumblers, cups, glass, metal, wood and plastic.

No heat

NEEDED

24 hrs

CURE BEFORE USE

Hand wash

RECOMMENDED

1

Clean the surface

Wipe with rubbing alcohol and let it dry completely. Dust and oils stop the transfer from sticking.

2

Peel the backing

Slowly peel away the backing paper (film A). The design stays on the clear top film.

3

Apply the design

Position it, then press it down from the center outward to push out air bubbles.

4

Burnish firmly

Rub over the whole design with a squeegee or your fingers for about 30 seconds.

5

Peel the top film

Peel the clear film back slowly at a low angle. If part of the design lifts, lay it back down and burnish again.

6

Let it cure

Wait 24 hours before washing or heavy handling.

PRO TIPS

- Curved surfaces: apply the center first, then work toward the edges.
- Hand wash only. Avoid the dishwasher, soaking and abrasive scrubbers.
- Not recommended for fabric or very rough and textured surfaces.
